**Reference: McSquared System Design Group Inc
Performance on Centre for Applied Technology (NAIT)**

The Centre for Applied Technology at NAIT Edmonton, Alberta, was completed in August, 2016. Mc Squared System Design group Inc. (MC2) was engaged in 2013 to perform audio/visual systems consulting in support of an extensive scope of class rooms, meeting rooms, teaching labs, specialty spaces and notably, the medical capture systems for the School of Health and Life Sciences teaching spaces and the signature simulation centre.

MC2 was one of the key project team participants that was instrumental in the success of the project having been completed on time, on budget and at high degree of satisfaction to NAIT.

MC2 undertook an extensive and complicated scope requiring a significant amount of stakeholder input, design team coordination, procurement development, detailed design, construction and testing/commissioning activities. Their services throughout these phases of the project was performed consistently of a high quality, with extraordinary attention to detail, sensitive to budget and schedule risks and support to the project team and NAIT staff during the critical handover and operational readiness phase.

I would not hesitate to recommend MC2 as a qualified, competent and dedicated consultant with an unwavering commitment to project success.

Sincerely,

A handwritten signature in blue ink, appearing to read "Lou Zoldan", with a long, sweeping underline.
